

Methodologies in the application of TDA-Mapper

Clare Kennedy, Darcy, Miller

April 2026

1 Title: Applications of Topology

2 Name, Affiliation, Email

- Lead: George Clare Kennedy, <mailto:george-clarekennedy@uiowa.edu>
- Co: Jacob Miller, Isabel Darcy
- Affiliation: University of Iowa

3 Public Description: 500 Characters

Topology is easy to think of as a discipline of math with little relevance to the “real” world; however, the broad idea of finding “shape” in data has led to novel insights in various fields, including neuroscience and cancer research. In this session, speakers will discuss their use of topological ideas and frameworks in their work, as well as discuss mathematical tools and theory used in topological data analysis.

4 Sample Speaker List

- Brad Theilman, Sandia National Laboratories
- Enrique Alvarado, Iowa State University

5 Description: 3000 Characters

This session will bring together speakers from many disciplines, under the umbrella of topological data analysis (TDA) and visualization. This will include theoretical mathematicians who study algorithms such as Mapper and concepts like persistent homology and dimensionalization reduction, as well as researchers who are not mathematicians who have used these ideas successfully in their

work. There will be ample discussion of software and opportunities to collaborate on larger TDA and visualization libraries, an area currently lacking in availability, user friendliness, and standardization.

6 MSC

One of:

- 101: Teaching and Learning
- 102: Recreational Mathematics
- 103: Professional Development and Professional Concerns
- 104: Wider Issues
